

EXP 2 : ONLINE BUS TICKET BOOKING SYSTEM

AIM :

To design and develop a simple prototype of an Online Bus Ticket Booking System using Figma, demonstrating the user interface and navigation flow from searching for a bus to completing a ticket booking.

PROCEDURE :

- Open Figma and create a new design file.
- Create a Home Page for the Bus Ticket Booking System.
- Add a navigation bar containing options such as Home, Book Ticket, My Bookings, and Contact.
- Add a bus search section with fields for From, To, Journey Date, and Number of Passengers.
- Create an Available Buses screen displaying bus name, departure time, arrival time, duration, fare, rating, and available seats.
- Add a Select Bus option for choosing a preferred bus.
- Create a Seat Selection screen with available, selected, and booked seats.
- Create a Passenger Details screen containing fields for name, age, gender, mobile number, and email.
- Create a Payment screen with payment options such as UPI, debit/credit card, and net banking.
- Create a Booking Confirmation screen displaying booking ID, passenger details, bus details, seat number, and total amount.
- Maintain a consistent blue-and-white color scheme, typography, buttons, cards, and spacing throughout the prototype.
- Use Figma's Prototype feature to connect the screens and demonstrate the booking flow:
Home → Available Buses → Seat Selection → Passenger Details → Payment → Booking Confirmation.
- Preview the prototype and verify that the navigation between the screens works correctly.

RESULT :

A functional UI prototype of an Online Bus Ticket Booking System was successfully designed using Figma. The prototype demonstrates the complete booking process, including bus search, bus selection, seat selection, passenger details, payment, and booking confirmation through an interactive user interface.

Experiment 3 : E-Commerce Mobile Application Prototype

AIM :

To design and develop a prototype of an E-Commerce Mobile Application using Figma to resolve conflicting stakeholder opinions by presenting alternative user interface designs and demonstrating the complete online shopping flow.

PROCEDURE :

- Open Figma and create a new design file.
- Create the Home Screen of the E-Commerce mobile application.
- Add the application logo/name, search bar, product categories, promotional banner, and popular products.
- Create two alternative Home Screen designs with different visual styles to address the conflicting stakeholder preferences.
- Create a Product Listing screen displaying products with images, names, ratings, prices, discounts, and wishlist options.
- Add filter and sort options to the Product Listing screen.
- Create a Product Details screen containing product image, product name, rating, price, description, quantity selector, and Add to Cart/Buy Now options.
- Create a Shopping Cart screen displaying selected products, quantity controls, subtotal, delivery charges, and total amount.
- Create a Checkout screen containing delivery address, contact details, payment options, order summary, and Place Order button.
- Create an Order Confirmation screen displaying the order ID, order status, estimated delivery date, and options to track the order or continue shopping.
- Maintain a consistent mobile-friendly layout, typography, colors, buttons, icons, cards, and spacing throughout the prototype.
- Use Figma's Prototype feature to connect the screens: Home → Product Listing → Product Details → Cart → Checkout → Order Confirmation.
- Present the two alternative Home Screen designs to stakeholders for comparison and feedback.
- Incorporate the preferred design direction and verify the complete prototype flow.

RESULT :

A mobile E-Commerce application prototype was successfully designed using Figma. Two alternative UI designs were provided to address conflicting stakeholder opinions, allowing them to compare the interfaces and provide feedback for approval. The prototype also demonstrates the complete shopping flow from product browsing to order confirmation.
